SUMMARY

Mobile Software Engineer with 5+ years of experience architecting high-performance cross-platform and native applications, with a focus on intuitive UI/UX, seamless REST API integration, and offline-first data syncing. Proven track record leading end-to-end app delivery, CI/CD automation, and Agile/Scrum-based development cycles in close collaboration with designers, backend engineers, and product managers. Strengthens every release with layered security hardening and proactive crash monitoring, while leveraging AI-assisted development and testing workflows to accelerate delivery without compromising quality.

EDUCATION

Nepalaya College | Kathmandu, Nepal

Bachelor's in Computer Science and Information Technology

08/2017 - 05/2022

WORK EXPERIENCE

3Bird | Netherlands | Remote

Software Engineer

10/2024 - Present

- **End-to-End Delivery & CI/CD:** Led the end-to-end development and architecture of our production mobile app, setting up automated CI/CD pipelines through Codemagic that cut manual app store deployment times by 80%
- **Automated Testing & QA Gates:** Cut production bugs by 50% by writing comprehensive unit tests and configuring Maestro automated E2E UI testing suites, enforcing strict quality verification gates on every Codemagic pull request
- **Agile Delivery & Cross-Functional Collaboration:** Operated within a formal Scrum framework using Jira for sprint planning and daily standups, working directly with backend engineers and product managers to align on API contracts, feature scope, and release timelines
- **Crash Monitoring & Debugging:** Monitored production stability using Firebase Crashlytics, triaging and resolving crash reports to keep the app responsive and reliable after every release
- **Alternative Payment Architecture:** Published a digital sales app using alternative billing pipelines (Apple's ExternalPurchaseCustomLink and Google's External Offers API) to fetch tokens, report transactions, and legally bypass standard platform fees
- **Web Integration & SSO:** Added new features to our existing web application using Keycloak SSO and role-based user management

Kotuko | Kathmandu, Nepal | Hybrid

Mobile App Developer

04/2021 - 09/2024

- **Greenfield Development & User Feedback:** Developed apps like BicocApp and R-kare completely from scratch, taking them from the first line of code to successful store launches while using real user reviews and crash reports to ship upgrades and feature tweaks regularly
- **App Store Optimization & Organic Growth:** Executed App Store Optimization (ASO) strategies across Google Play and the App Store, driving organic discoverability to scale client applications to a combined 25,000+ total downloads
- **Cross-Functional Delivery:** Collaborated directly with UI/UX designers and backend engineers within an Agile/Scrum workflow using Jira, translating design specs into pixel-accurate builds and aligning on API contracts ahead of each sprint release
- **Security & Accessibility:** Built layered security defenses to prevent tampering and reverse engineering, and ensured full accessibility support (TalkBack/VoiceOver, external keyboards) for students with disabilities
- **Code Optimization & Architecture:** Cleaned up legacy codebases by moving them over to clean architecture (BLoC/Riverpod) and setting up local offline caching, which cut down app crashes and made screen loading times 20% faster

PROJECTS

BicoccApp (University Portal Mobile Application) ([View Listing](#))

Technologies: Flutter, Xcode, Firebase, Swift, Push Notifications, REST APIs

- **Greenfield Development & Launch:** Built the entire app completely from scratch, handling the full design, development, and launch to cross 23,000+ total downloads
- **ASO-Driven Growth:** Owned App Store Optimization (keyword research, screenshots, store listing copy) for both Google Play and the App Store, driving the organic discoverability behind the app's download growth
- **Advanced Security & RASP:** Implemented strict security mechanisms like root and jailbreak detection alongside RASP (Runtime Application Self-Protection) to block reverse-engineering and safeguard student portal data
- **Inclusive Accessibility:** Designed the UI to fully support native accessibility features, including TalkBack/VoiceOver compatibility and physical keyboard support for students with disabilities

R-kare (Healthcare Application) ([View Listing](#))

Technologies: Flutter, Xcode, Firebase, Deep Linking, Swift, REST APIs, Media library

- **App Development & Media Pipelines:** Built a secure healthcare app from the ground up, handling core features like authentication, appointment bookings, and background file/voice message uploads
- **Real-Time Data Streams & Security:** Used Dart Streams to create instant chat channels between patients and medical staff, implementing encryption and hashing to keep private health data safe
- **Medical Data Security & 2FA:** Implemented multi-factor authentication (MFA) via Google Authenticator alongside cryptographic hashing and salting to guarantee the integrity and security of uploaded medical records

MeetingTrack (AI-Powered Meeting Productivity SaaS) ([View Listing](#))

Technologies: Flutter, REST APIs, WebSockets, BLoC/Riverpod, Native Background Services (flutter_background_service), Hive/SQLite

- **Alternative Payment Architecture (IAP Bypass):** Architected an out-of-app alternative payment pipeline to legally bypass standard platform IAP fees, utilizing Apple's ExternalPurchaseCustomLink API and Google's External Offers API to securely fetch native transaction tokens and handle compliance reporting back to store servers
- **Background Audio & Offline-First Sync:** Engineered a robust, native background audio recording service that prevents OS termination when the device is locked, pairing it with an offline-first caching architecture that queues media chunks locally to eliminate data loss
- **Asynchronous AI Integration & Live Collaboration:** Integrated WebSockets and REST APIs to fetch and asynchronously parse heavy downstream JSON payloads from AI transcription microservices, updating a live-sync collaborative workspace UI via Streams without blocking the main rendering thread
- **Automated Testing:** Wrote AI-assisted end-to-end tests using Maestro to handle regular user paths, making sure things like the payment purchase flow and main features work perfectly every time

SKILLS

Programming: Flutter/Dart, Swift, SwiftUI, Kotlin, UIKit, TypeScript, React.js, Next.js

Technical/Programmatic: Git, Agile/Scrum (Jira), Firebase (Distribution, Analytics, Crashlytics), GraphQL, Postman, CI/CD, Xcode, Play Store/App Store Deployment, AI-assisted Development & Testing
